

Infrastructure & Engineering

Course Name

LaserSweep

Course Description

This 1 day LaserSweep™ course covers all aspects of setting up and using a Bluetooth LaserSweep™ with a PDA to survey structures. The course includes an assessment leading to a certificate being awarded to successful delegates. The course covers how to assemble and use the LaserSweep™ and includes hints and tips for ensuring that the measured profile is an accurate representation of the structure. The course alone does not qualify the delegate as a surveyor but complements surveying skills already held. The training takes place at LaserRails specially converted premises in Holmewood, where a length of ballasted railway track is available indoors. This is used for many practical, hands-on exercises with the LaserSweep making the training very relevant to real life experience. No official prerequisites are required but it is assumed that delegates are competent in using a PC with good working knowledge of Microsoft Windows. Buffet Lunch is provided during the course

Audience

Track Engineers, Surveyors.
