

Overhead Line Engineering

Course Name

NP Distribution Interfaces

Course Description

The Distribution Interfaces intervention standardises current processes involved with the interface of Overhead line equipment and distribution equipment within substations or where cabled on the network. Within the current issue of NR/L3/ELP/29987, the requirements to work on lineside feeder disconnectors and cabled sections of the overhead line are not easy to understand. Therefore, this module was developed for these interfaces including diagrams and illustrations to represent step-by-step guidance on how to safely isolate, earth and work in these locations. People wanting to attend this course will need to complete Nominated Person SAI.

Audience

People who hold Nominated Person

Duration: 1 Day(s) **Class Size:** 8

Competence Name Awarded

Nominated Person OLE AC Isolation.Distribution Interfaces

Competence Awarded

NPDI/AC-i

Course Code

NPDI/AC-i

Prerequisite Name

Nominated Person OLE AC Isolation Nominated Person OLE AC Isolation.SAI

Prerequisite Short Code

NP OLE/AC-i, NPSAI/AC-i

Skills Assessment Scheme Regime**Course Type**

Face to Face

Download Date: 15/5/2024
